DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed April 11, 2005, with respect to the rejections of Claims 1 – 9, 11 – 13, and 15 – 23 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground of rejection is made in view of 35 USC § 112, first paragraph. Albeit, since independent Claims 1 and 21 are unchanged, this Office Action is Non-Final and meant to replace the Non-Final Office Action (February 5, 2005).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. **Claims 1 – 9, 11 – 13, and 15 – 23** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

4. More specifically, exemplary independent Claim 1 recites, therein, “calibrating for pixel gain by covering a video channel with an automatic gain control tab; and calibrating for pixel gain by multiplying a video signal output from an integrator, said video signal compensating for pixel error for both a video channel with an automatic gain control tab and video channel without

an automatic gain control tab, with a video signal inputted to a video channel other than the video channel covered with the automatic gain control tab.” Based upon the recited claim language, it appears that the claims are at least directed towards figures 1 and 3 of the present application; however, Applicant has failed to enable one with ordinary skill in the art to apply the disclosure of figure 3 with regard to the disclosure of figure 1.

5. Turning to the specification, Figure 1 is described, on page 3 (line 24) – page 4 (line 20), as an exemplary calibration system (100) having an uncalibrated video input (1000) and a calibrated video output (1400), wherein there is no mention or detailed described regarding the formation of the uncalibrated video input (1000). Figure 3, on the other hand, is described on page 5 (line 27) – page 7 (line 9), as a pixel offset process (400) having two video channel inputs including one video channel input with an automatic gain control tab and one video channel input without an automatic gain control tab, wherein the video channel with an automatic gain control tab is multiplied by an automatic gain control setpoint. The respective detailed descriptions of figures 1 and 3 have failed show how the uncalibrated video input (1000) to the system (100) in figure 1 becomes two video channel inputs (with a tab and without a tab) to the process (400) in figure 3 and how the two video channel outputs (with a tab and without a tab) of the process (400) in figure 3 becomes the video input (1300) to the process (500) in figure 4. Additionally, the detailed description of figure 3 has failed to show how the “automatic gain control tab setpoint” is established or how a “tab” yields a video channel input with an “automatic gain control tab” and a video channel input without an “automatic gain control tab”. Finally, the Examiner notes a “white tab”, a “tab covers” and “automatic gain control tab” are terms that are NOT known or enabling to one with ordinary skill in the art.
